

SERVICE OVERVIEW

# EQUIPMENT CONDITION MONITORING

# Real-time oil debris monitoring. Anytime. Anywhere.

Gastops Connect delivers critical equipment condition monitoring and analysis capabilities to your browser, wherever you are.

## Overview

Gastops Connect collects, processes, and analyzes data from MetalSCAN sensors, combines it with your equipment controller data and third-party data to create a comprehensive, real-time view of equipment condition accessible through any web browser device. It also provides an aggregated view across multiple sites for better analysis.

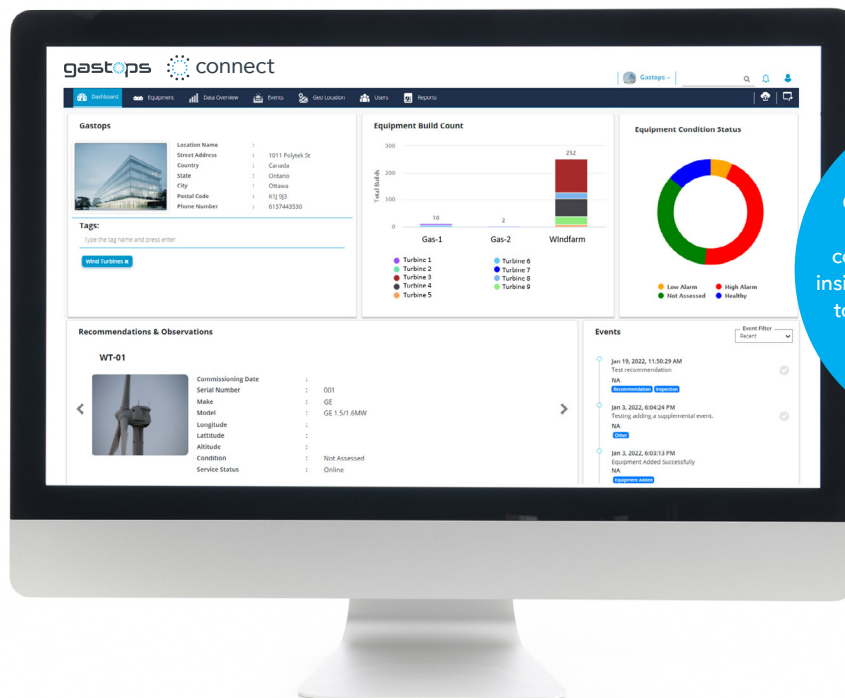

Equipment operators, asset managers and maintenance professionals gain access to instant notification of changes in equipment condition, and visibility into the health of equipment located anywhere in the world.

---

## Gastops Equipment Condition Analytics (ECA) Services

With over 40 years of equipment condition data analysis, intelligence, and technical expertise in manufacturing world-class instrumentation, our team of Equipment Condition Analytics experts is well positioned to provide unparalleled advisory and monitoring services. This key capability is available to users registered for the premium level monitoring service.

---

## The Fast Facts about Gastops Connect

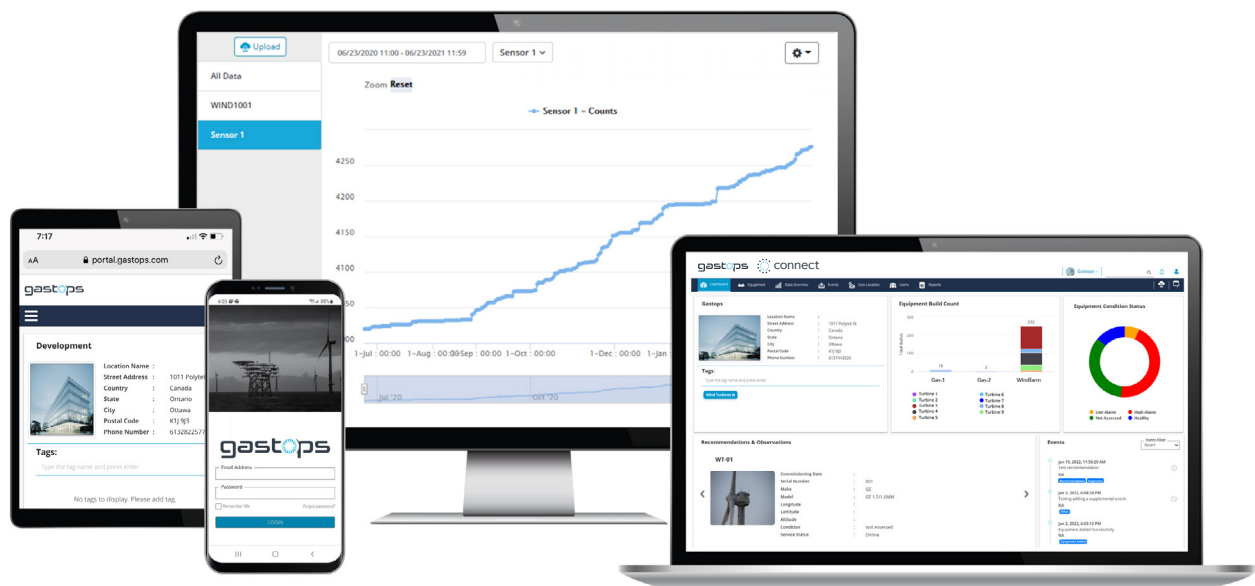

- Cloud-based monitoring portal for easy access
- Monitoring and analytics platform suitable for all types of oil wetted equipment applications
- Tailored watchlists, dashboards and reports allowing users to focus on critical assets
- Personalized SMS, email and web-based warnings, alarms, and event notifications
- Configurable views including equipment cross-comparisons by type, location and more
- Integrated REST API and SFTP server for easy data sharing with 3rd-party systems
- Data import and export in several industry-standard formats along with direct integration into MetalSCAN Monitor software
- Multi-tiered subscription-based levels for self-performers and those requiring technical expertise:
  - Premium Monitoring Service – Turnkey monitoring service including access to Gastops' ECA team and monthly fleet status reports
  - Basic Monitoring Service – Secure data hosting and management service provided by Gastops

---

## About Gastops

Gastops research and development has been driving innovation in equipment condition monitoring for more than 40 years. Our hardware, software and expert services enable turbine, gearbox and engine owners, operators and maintainers to maximize the Remaining Useful Life (RUL) of their equipment while minimizing the downtime that comes with unnecessary maintenance and overhaul activities.

Whether retrofitted or included from the original manufacturers, Gastops' condition monitoring sensor technology and solutions are proven and trusted in defence, aerospace, energy and industrial applications around the globe.
